

Research title:

How does the Primary National Curriculum prepare a future generation of children?

Does the National Curriculum enable the current generation of teachers and parents to support children's learning?

What research are you doing?

I intend to carry out three different types of data collection methods:

Interviews - with teachers

Online questionnaires - for parents/carers

Focus groups - with children

What is the National Curriculum?:

The National Curriculum is a set of subjects and standards set out by the Government. It consists of core and non-core subjects.

Core subjects are: Mathematics, English, Science

Non-core subjects are: art, design technology, physical education, religious education, geography, history, languages, music, computing and citizenship.

What is the aim and potential benefit of the research?

I hope the research collected will be able to benefit the education system by highlighting positive aspects of the National Curriculum as well as identifying any potential areas of improvement to consider.

The aims of the research are to determine how the National Curriculum has a positive and/or negative impact on children, teachers and parents/carers.

Do I have to be part of the research?

No, this research is voluntary and you have the right to withdraw at any time. All the data collection will be confidential and anonymous, questionnaires will be unidentifiable.

What will happen to the research?

The research will be marked by the University and if deemed worthy of publication, the research may be made accessible on academic sites.
